Message from IEEE AINA 2016 Steering Committee Co-Chairs

Welcome to the 30-th IEEE International Conference on Advanced Information Networking and Applications (IEEE AINA 2016). It is our great pleasure and honor to held AINA 2016 at Le Regent Congress Centre, Crans-Montana, Switzerland from March 23 to March 25, 2016. On behalf of the AINA Steering Committee and IEEE AINA 2016 Organizing Committee, we would like to express to all participants our cordial welcome and high respect.

AINA is an International Forum, where scientists and researchers from academia and industry working in various scientific and technical areas of networking and distributed computing systems can demonstrate new ideas and solutions in distributed computing systems.

AINA was born in Asia, but it is now an International Conference with high quality thanks to the great help and cooperation of many international friendly volunteers. AINA is a very open society and is always welcoming international volunteers from any country and any area in the world. AINA is an International Conference sponsored by TCDP of IEEE Computer Society.

In conjunction with IEEE AINA 2016 main conference, we have also 20 International Workshops. Every year after the conference, we usually publish special issues in International Journals. The authors who attend IEEE AINA 2016 and present their papers in the main conference and workshops can submit a revised version of the paper to one of the special issues.

An international conference can be organized by support and great voluntary efforts of many people and organizations and our main responsibility is to coordinate various tasks carried out with other willing and talented volunteers.

We would like to thank IEEE AINA 2016 General Co-Chairs: Antonio Jara, HES-SO, Switzerland, Hui-Huang Hsu, Tamkang University, Taiwan and Markus Aleksy, ABB AG, Germany for their great efforts to make a very successful organization of IEEE AINA 2016.

We would like to express our special thanks to Dominique Genoud, HES-SO, Switzerland, Tomoya Enokido, Risho University, Japan and Kin Fun Li, University of Victoria, Canada as PC Co-Chairs of IEEE AINA 2016 for making excellent technical program.

We greatly appreciate Yann Bocchi, HES-SO, Switzerland, Elis Kulla, Okayama University of Science, Japan and Eric Pardede, La Trobe University, Australia as Workshops Co-Chairs of IEEE AINA 2016 for organizing 20 workshops in conjunction with IEEE AINA 2016.

We would like to thank also all track area chairs, program committee members, workshops organizers and workshops committee members for carefully reviewing the papers.

We have special thanks to Makoto Ikeda as Finance Chair of IEEE AINA 2016 and Mr. Tetsuya Oda and Mr. Shinji Sakamoto as Web administrators.

Message from IEEE AINA 2016 General Co-Chairs

It is our great pleasure to welcome you all at the 30-th IEEE International Conference on Advanced Information Networking and Applications (IEEE AINA 2016), which will be held at Le Regent Congress Centre, Crans-Montana, Switzerland from March 23 to March 25, 2016.

IEEE AINA International Conference is a forum for sharing ideas and research work in the emerging areas of information networking and their applications. The area of advanced networking has grown very rapidly and the applications around it have experienced an explosive growth especially in the area of pervasive and mobile applications, sensor networks, ad-hoc networks, vehicular networks, multimedia computing and social networking, semantic collaborative systems, as well as Grid, P2P, IoT, Fog and Cloud Computing. This advanced networking revolution is transforming the way people live, work, and interact with each other, and is impacting the way business, education, entertainment, and health care are operating. The papers included in the proceedings covers theory, design and application of computer networks, distributed computing and information systems.

Each year AINA has received high submission from all around the world, and maintained high quality accepted papers as it aspires to be one of the main international conferences on the Information Networking in the world. In conjunction with the IEEE AINA 2016 conference, there are 20 workshops, which also accepted high quality papers.

An international conference of this size requires the support and help of many people. A lot of people have helped and worked hard to produce a successful IEEE AINA 2016 technical program and conference proceedings. First, we would like to thank all authors for submitting their papers, the session chairs and distinguished keynote speakers. We are indebted to Program Area Chairs, Program Committee Members and reviewers, who carried out the most difficult work of carefully evaluating the submitted papers.

We would like to give our special thanks to Prof. Makoto Takizawa and Prof. Leonard Barolli, Co-Chairs of the Steering Committee for their strong encouragement, guidance and insights, and for spending a lot of energy for conference organization and shaping the conference program. We would like to thank Dominique Genoud, HES-SO, Switzerland, Tomoya Enokido, Ritssho University, Japan and Kin Fun Li, University of Victoria, Canada as PC Co-Chairs of IEEE AINA 2016. We would like to give our thanks also to Workshops Co-Chairs Yann Bocchi, HES-SO, Switzerland, Elis Kulla, Okayama University of Science, Japan and Eric Pardede, La Trobe University, Australia.

Our special thanks go to Makoto Ikeda as Finance Chair of IEEE AINA 2016 and Mr. Tetsuya Oda and Mr. Shinji Sakamoto as Web administrators.

Finally, we would like to thank the Local Arrangement Team of HES-SO University and Le Regent Congress Centre for their support and good local arrangement for the conference.

We do hope that you will have a great time in Crans-Montana, Switzerland.

Message from IEEE AINA 2016 Program Committee Co-Chairs

Welcome to the 30-th IEEE International Conference on Advanced Information Networking and Applications (IEEE AINA 2016), which will be held at Le Regent Congress Centre, Crans-Montana, Switzerland from March 23 to March 25, 2016.

The purpose of AINA conference is to bring together researchers, developers, and industrial experts to share new ideas and recent research results in the emerging areas of information networking and their applications. Nowadays, networks are going through a rapid evolution. The papers included in the proceedings cover all aspects of theory, design, and application of computer networks and distributed computing systems. Most of the papers deal with new trends in information networking, such as wireless sensor networks, ad-hoc networks, cloud computing, peer-to-peer systems, grid computing, pervasive and ubiquitous systems, multimedia systems, security, multi-agent systems, IoT and web-based systems.

This edition AINA received 556 paper submissions from all over the world. Each submission was peer-reviewed by program committee members or invited external reviewers. Finally, the program committee accepted 163 papers (about 29% acceptance ratio), which will be presented during the conference days. Unfortunately, many interesting and good papers could not be accepted in IEEE AINA 2016 due to the limited number of time slots allocated for presentations at the conference.

We are very proud and honored to have three distinguished keynote talks by Prof. Prof. Vincenzo Loia, University of Salerno, Italy, Dr. Martin Brynskov, Aarhus University, Denmark and Mr. Arijit Ukil, Tata Consulting Services, India, who will present their recent work and will give new insights and ideas to the conference participants.

Organizing an international conference of this size is of course a team effort. Therefore, we gladly admit that we had the help of many very professional people. First of all, we would like to thank all the authors for their interesting contributions since they shape the program and make it interesting for the audience. Moreover, we would like to express our thankfulness to all program-vice chairs for their great efforts. Additionally, we would like to thank all program committee members and reviewers who carried out the most important work to evaluate the submitted papers. We also thank the workshops chairs Yann Bocchi, HES-SO, Switzerland, Elis Kulla, Okayama University of Science, Japan and Eric Pardede, La Trobe University, Australia for organizing many excellent workshops and symposiums, which enrich the conference and provide additional opportunities for discussions and future co-operations.

The great success of the AINA conference series would not be possible without the enormous commitment and support of the steering committee co-chairs Prof. Makoto Takizawa and Prof. Leonard Barolli. Therefore, we would like to thank them for their strong encouragement and guidance.

The general coordination of an event such as AINA conference requires a lot of coordination effort as well as many other activities related to the conference organization. Here, we thank the general co-chairs Antonio Jara, HES-SO, Switzerland, Hui-Huang Hsu, Tamkang University, Taiwan and Markus Alekxy, ABB AG, Germany for their great support and invaluable suggestions. We give special thanks to Makoto Ikeda, Tetsuya Oda and Shinji Sakamoto for their great efforts and efficient work to deal with many conference matters.

We hope you will enjoy the conference and readings and have a great time in Crans-Montana, Switzerland

IEEE AINA 2016 Keynote Talk I

Prof. Vincenzo Loia, University of Salerno, Italy

A Computational Perspective to Situational Awareness

Abstract: Situation Awareness (SA) concerns all things happening around us and is typically associated to what is critical with respect to our interest. For instance, an airplane pilot does not need to be aware of everything around him but only the information required for driving correctly and safely. Endsley provided a more formal definition that considers Situation Awareness as a three-phase process: perception of the elements of an environment in a given time interval, comprehension of the aforementioned elements and projection of their states into the next future. More in details, from a computational viewpoint, SA aims at formalizing and deducing situations (occurring in the real world) by processing, fusing and abstracting context information.

We proposed the Perception-Oriented Approach to identify situations. Such approach is based on two phases: low-level perception and high-level perception. The low-level perception is realized by means of Semantic Technologies and allows to generate more abstract information from raw sensor data by also considering knowledge about the environment. Sensor Middleware like Global Sensor Network (GSN), Linked Sensor Middleware (LSM), OpenIoT and Semantic Web Ontologies like W3C SSNO have been employed to support gathering and processing of sensor data. At this level, we proposed approaches to assess the reliability, and other quality dimensions, of sensor data (observations). In particular, we introduced an approach to exploit a fuzzy-based consensus model to handle cases in which redundant sensors provide discordant observations.

Moreover, high-level perception is realized by means of techniques like, for instance, Fuzzy Formal Concept Analysis, Fuzzy Cognitive Maps, etc. and allows to organize and classify abstract and actionable information to support the work of DSSs. At this level, we proposed a nature-inspired approaches, based on Artificial Bees, for mining association rules used to foster the resilience of the situation identification algorithms and the adoption of Semantic Web technologies, like SAW Ontology, to model situations and Semantic Inference Engine (OWL-based and Rule-based) to reason on them.

IEEE AINA 2016 Keynote Talk II

Dr. Martin Brynskov, Aarhus University, Denmark

Open and Agile Smart Cities

Abstract: Cities across the globe are looking for ways to spur open innovation. The reason is simple. Innovation is needed to overcome the digital transition of cities and communities, and it has to be open for two reasons: First, it must be open to include a variety of stakeholders, because services are increasingly connected to other systems and co-created with stakeholders outside the old verticals, and second, it must help to establish a competitive but attractive enough market for developers, thereby driving down cost, increasing quality and avoiding vendor lock-in and monopolization. Seen from a developer's perspective, one city is not a market. A number of countries or a continent is a sizable market. But global de facto standards for portability and interoperability are the only way to create a true global market for smart city services. In such a market, developers can start investing and specializing with an outlook of sustainable business models in public-private innovation partnerships.

IEEE AINA 2016 Keynote Talk III

Mr. Arijit Ukil, Innovation Labs, Tata Consultancy Services, India

IoT Healthcare Analytics: The Importance of Anomaly Detection

Abstract: Healthcare data is quite rich and often contains human survival related information. Analyzing healthcare data is of prime importance particularly considering the immense potential of saving human life and improving quality of life. Furthermore, IoT revolution has redefined modern health care. IoT offers its greatest promise to deliver excellent progress in healthcare domain. In this talk, proactive healthcare analytics specifically for cardiac disease prevention will be discussed. Anomaly detection plays a prominent role in healthcare analytics. In fact, the anomalous events are to be accurately detected with low false negative alarms often under high noise (low SNR) condition. An exemplary case of smartphone based cardiac anomaly detection will be presented.
